Claims 1 and 4-17 are pending in the instant application.

Claims 1, 4, 5, 8, 9 and 14-17 are presented for examination.

The amendments and remarks filed on August 10, 2009 have been received and entered.

Claims 1, 4, 5, 8, 9 and 14-17 are rejected under 35 U.S.C. 112 first paragraph for the reasons set forth on pages 2-5 of the office action of June 4, 2009.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 4, 5, 8, 9, 14 and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are directed to term "derivative". The term derivative is indefinite because it is unclear how far one can deviate from the parent compound without the "derivative" being so far removed therefrom to be a completely different compound.

Applicant's arguments and remarks have been carefully considered, but are not deemed to be persuasive. Applicant in his remarks requests clarification in respect to the scope of the subject matter being examined. Applicant is informed that the claims have been examined to the extent that they read on the elected subject matter for art rejection and for the 112 rejection. Claim 1 encompasses any 5-lipoxygenase compound. Therefore, the 112 rejection has been applied to claim 1 as well. Applicant's arguments regarding the 112 scope of enablement have been noted.

Applicant in his remarks refers to different sections of the specification indicating that the specification discloses some compounds having 5-lipoxygenase inhibitory activity and one example to show the effect of one compound having 5-lipoxygenase activity on lowering serum triglycerides. Applicant is reminded that the claims are drawn to the use of a 5-lipoxygenase inhibitor for lowering serum triglycerides. The instant specification fails to teach the correlation between the 5-lipoxygenase activity and lowering serum triglycerides. There is no established correlation between the lowering of serum triglycerides and 5-lipoxygenase inhibitory activity. From one example given in the specification one can not conclude that the lowering of serum triglycerides is as a result of 5-lipoxygenaseinhibition or any other mechanism. Therefore, in the absence of established correlation between the structure and function the claims directed to the use of a compound having 5-lipoxygenase activity remain rejected under 35 U.S.C. 112 first paragraph for scope of enablement.
